

Conference 12th and 13th September 2019 Workshop 11th September 2019

University of Strathclyde, Glasgow, UK

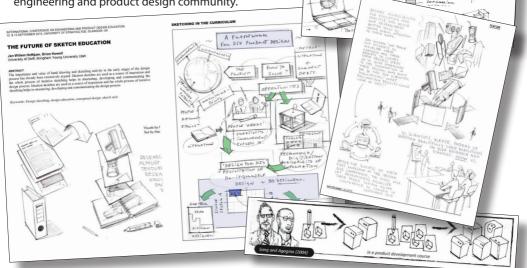

## **NEW: VISUAL PAPERS TRACK**

## **Sketching in Design Practice, Education & Research.**

Visual papers are papers in which the visual components are essential in communicating the primary information while text plays a supporting role.

Sketching is a fundamental language for design and designers. It helps us analyse, organize, communicate, reflect, negotiate, persuade, explain, discuss, and present designed concepts, products, experiences and services.

Sketching is a fundamental component of design and this is a new opportunity to share your visual based processes, products, education and research with the engineering and product design community.

## This track seeks submissions that explore how we practice, educate and research within the field of sketching. We invite submissions that investigate:

- New sketching methods or experiences in practice, education, or research.
- The use of sketching in non-object-oriented design domains such as experience or service design.

- Sketch driven case studies or products in design practice or education.
- Other insights, practices or processes in sketching that would advance the knowledge and capacity of the wider professional or education community.
